

Compendium of Education and Training Modules

“Clima-, Environment-, Nature- Protection and Renewable Energy - Professional”

May 2018

Program research and development board:

Introduction

Aim of the project to develop a course to train and qualify professionals in Clima-, Environmental-, Nature-Protection and Renewable energy are the charge of issues in the practical areas of clima-, environmental -, nature protection and environmental management, in assessment of plans in the field of environment, as well as strategic assessment of environmental impact to work in the area of environmental conservation, nature conservation and environmental protection in the respective of agencies, authorities and companies, research and educational institutions.

The objective of the practical orientated specialty is also to diversify career options in the areas of policy, local, regional, national and international activities.

Employment opportunities in the field include working for consultancies, local authorities, utilities providers and contractors and organizations within the voluntary sector. Public and private organizations more and more are also looking for competent personnel capable of operating environmental management systems and skills that comply with national, EU-wide and international legislation, practical experience and best-practise.

This curriculum concept based on research about existing furthering education programs, experiences, needs and requirements in the participating countries Germany, Hungary, Poland and Romania and respect so the futural needs of an EU-wide approach. The Design of the curriculum setup innovative training methods in combination of theoretical knowledge, case studies and practical key skills.

Successfull participants are part of the futural skill base for work in a complex environment that requires an interdisciplinary approach.

In the internship time also want to be offered a language in-depth training in the language of the country, where the internship want to be or when origin mother language of the participant than in english.

Curriculum want to be tested and provide by exchanging potential european trainers and trainees within the participating countries.

Overview

| | | |
|--------------------------|--|---------|
| Introduction | | 2 |
| Programme Structure..... | | 3 |
| Module 1 | Fundamentals, Methods and Tools..... | 4 - 24 |
| Module 2 | Clima-, Environment- and Nature-Protection..... | 25 - 51 |
| Module 3 | Sustainability in Renewable energy..... | 52 - 76 |
| Module 4 | Profile and Practise – Internship – Language In-Depth..... | 77 - 83 |

Section 1 Module 01
Topic 01 to 05 - Fundamentals, Methods and Tools

| | |
|-------------------------------------|--|
| Module No./Code | M1 - 01 |
| Module Designation | Introduction to Sustainability in Environment and Grow |
| Units of the Module (if applicable) | 1: Introduction in the qualification content, goals, schedule and certification 2: Sustainable Development Goals and EU |
| Module Content | <p>This module provides all information about the qualification, module orientation, goals, schedule and certification.</p> <p>Also it provides specific knowledge in sustainable development for people, economy, politics and society.</p> <p>Specific topics:</p> <ol style="list-style-type: none"> 1. Introduction to the qualification “Environment-, Nature-, Clima- Protection and Renewable Energy Professional” <ul style="list-style-type: none"> ● EU-wide approach ● Curriculum, Learning Goals and Lectures ● Guidelines, Organisation and Schedule ● Examination, Internship and Certification ● Learning Outcomes and ECTS-System 2: Sustainable Development Goals and EU <ul style="list-style-type: none"> ● Sustainable Development Goals – Problematic and orientation for development and grow ● EU-Framework for Development ● Cycle of Environment and Sustainability |
| Qualification Goals | <p>Participants obtain specific knowledge</p> <ul style="list-style-type: none"> ● of guidelines in sustainable development in all fields of the society <p>Furthermore, participants should get an interdisciplinary view to challenges in the fields Clima-, Environment-, Nature-Protection and Renewable Energy in the society.</p> |
| Planing period | 1 st week of the qualification / 1 st month |
| Module Duration | 2 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 0 |

| | |
|---|---|
| Total Workload and Type (individual studies + contact hours) | 16 hours (Contact hours 12 h = 75 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | none |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | participation |
| Contribution to Final Grade | 1,1% |

| | |
|---|---|
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Completing exercises and presenting the results |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | none |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>http://www.un.org/sustainabledevelopment/sustainable-development-goals/</p> <p>https://ec.europa.eu/europeaid/policies/european-development-policy/2030-agenda-sustainable-development_en</p> <p>http://www.sdgfund.org/library</p> <p>https://sustainabledevelopment.un.org/content/documents/GE%20Guidebook.pdf</p> |

| | |
|-------------------------------------|--|
| Module No./Code | M1 - 02 |
| Module Designation | Urban Sustainability Assessment Framework |
| Units of the Module (if applicable) | 1: Governance, Policy and Resilience 2: Framework of Methods 3: Stakeholder, Relationship and Urban Sustainability Assessment |
| Module Content | <p>This module provides introduction of governance, resilience and the main important methods for sustainability assessment in international, EU- and national context.</p> <p>Also it provides specific knowledge in sustainable development and policies for people, economy, politics and society.</p> <p>Specific topics:</p> <p>1: Governance, Policy and Resilience</p> <ul style="list-style-type: none"> ● Policy approach ● Resilience as goal in a sustainability development ● Monitoring and Uncertainty <p>2: Framework of Methods</p> <ul style="list-style-type: none"> ● Environmental Impact Assessment (EIA) ● Strategic Environmental Assessment (SEA) ● Cost-Benefit Analysis (CBA) ● Multi-Criteria Analysis (MCA) ● Life-Cycle Analysis (LCA) ● Other methodologies ● European Research Area Network (ERA-NET) ● Sustainability rating systems <p>3: Stakeholder, Relationship and Urban Sustainability Assessment</p> <ul style="list-style-type: none"> ● Stakeholder approach for Sustainability ● Relationship of land-use, urban development and energy ● Sustainability assessment for urban development in building (LEED/BREEAM/DGNB/NA) |
| Qualification Goals | <p>Participants obtain basic and specific knowledge in the methods relevant for sustainability analysis to a specific problem, distinguish between systemic, normative and procedural aspects of sustainability, apply the sustainability solution space to a real world problem, assess and evaluate a series of options from a sustainability perspective.</p> <p>Furthermore, participants should get an</p> |

Section 1 Module 02 Topic 01

Project Management

| | |
|-------------------------------------|--|
| Module No./Code | M2 - 01 |
| Module Designation | Project Management in Environment-, Nature-, Clima Protection and Renewable Energy Projects |
| Units of the Module (if applicable) | 1: Introduction in Project Management 2: Project Management Tools 3: Project Controlling and Responsibilities 4: Leadership 5: Problem solving, analysis and impact 6: Practical group projection |
| Module Content | <p>This module provides knowlge and first practical experience with project orientated work and project management.</p> <p>Also it provides specific knowledge and first experience in the challenges of the project life cycle for environment-, nature-, clima- and renewable energy projects in practise.</p> <p>Specific topics:</p> <p>1: Introduction in Project Management</p> <ul style="list-style-type: none"> ● Definitions, scope and processes in project ● Characteristics of projects in Environment, NatureProtection and Renewable Energy context ● Project - Challenges and LifeCycle ● Goals/no-goals and target conflicts ● Project team and Stakeholders ● Risk Management in project ● Budget estimation and scenarios ● Project - Communication and collaboration ● International aspects of project management <p>2: Project Management Tools</p> <ul style="list-style-type: none"> ● Work assignment, packages and WBS ● Timetables, GANTTDiagram, Milestones ● CriticalPath Analysis ● Software and Services <p>3: Project Controlling and Responsibilities</p> <ul style="list-style-type: none"> ● Milestone Trend Analysis ● Capability Analysis ● 0-100 Method ● GANTT-Tracking ● Task & Allocation ● Pesponsibilities |

| | |
|---|--|
| | <p>4: Leadership</p> <p>5: Problem solving and impact</p> <ul style="list-style-type: none"> ● Problem Tree ● Logical Framework Analysis ● Impact <p>6: Practical group projection</p> <ul style="list-style-type: none"> ● trying methods and tools on a selected topic ● Group presentation |
| Qualification Goals | <p>Participants obtain specific knowledge in the Framework and Methods of project management. They are able to work and participate as member in project teams and matrix organizations. First skills in generation, preparation, design, execution, controlling and managing of small scale projects in group work and in teams want to be developed.</p> <p>Furthermore, participants should get an interdisciplinary view to challenges of project orientated decisions, processes and workload in the field of Clima-, Environment-, Nature-Protection and Renewable Energy.</p> |
| Planing period | 1 st to 2 nd month |
| Module Duration | 10 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 3 (based on 25 hours = 1 credit) |
| Total Workload and Type (individual studies + contact hours) | 80 hours (Contact hours 32 h = 40 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | none |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit | Participation, project report and group |

| | |
|---|--|
| Award | presentation |
| Contribution to Final Grade | 5,30% |
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Completing exercises, group projection and presenting the results |

| | |
|---|---|
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | none |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> |

Section 1 Module 03 Topic 01

Geographical Information System (GIS)

| | |
|-------------------------------------|--|
| Module No./Code | M3 - 01 |
| Module Designation | Geographical Information Systems (GIS) in Urban Planning, Clima-, Environment-, Nature-Protection and Renewable Energy Projects |
| Units of the Module (if applicable) | <ol style="list-style-type: none"> 1: Introduction to Urban Planning, Geographical research and information systems 2: Introduction to Geospatial Technology and GIS 3: Introduction to Spatial Analysis 4: Data Aquisition and Data Management 5: Cartographic Design and Outputs 6: Introduction to Remote Sensing 7: Practical group projection within a GIS-Framework |
| Module Content | <p>This module provides core principles, concepts, models, and phenomena of geographical informations and systems.</p> <p>It develope skills and competencies in analyze and apply geographical based research and communication effectively appropriate for professional audiences. Participants learn the ability to identify and use spatial principles, methods and techniques for problem-solving and decision-making in geographical systems and urban planning.</p> <p>They get basic geographic information knowledge and first spatial analytic skills to make the world a better place through engagement in public policy-making and discourse on social and environmental issues.</p> <p>Specific topics:</p> <ol style="list-style-type: none"> 1: Introduction to Urban Planning, Geographical research and information systems <ul style="list-style-type: none"> ● Introduction to Sustainable Land Use Planning and Participation Processes ● Plans, Planning Processes and Site Planning ● Environmental Planning Techniques ● Issues in Growth and deGrowth Management ● Sustainability and Future of Built Environment 2: Introduction to Geospatial Technology and GIS <ul style="list-style-type: none"> ● Understanding Geospatial Data Models ● Understanding Coordinate Systems and Map Projections ● Creating and Displaying Geospatial Data ● Understanding Remote Sensing and Aerial Photography ● Basic Geospatial Analysis Techniques ● |

| | |
|----------------------------|--|
| | <p>3: Introduction to Spatial Analysis</p> <ul style="list-style-type: none"> ● Introduction to Geospatial Analysis ● Introduction to Data Exploration ● Introduction to Vector Data Analysis (Overlay techniques, Site Selection Model, Network Analysis) ● Raster Data Analysis <p>4: Data Acquisition and Data Management</p> <ul style="list-style-type: none"> ● Introduction to Geospatial Data and Database ● Vector Data Structure and Quality ● Spatial Data Quality ● Raster Data Structure ● Data Sources <p>5: Cartographic Design and Outputs</p> <ul style="list-style-type: none"> ● Introduction to Cartographic Design ● Geodesy and Map Projections ● Map Types, Elements and Design Principles ● Data, Symbols and Visual Variables for Maps ● Introduction to Location based Services <p>6: Introduction to Remote Sensing</p> <ul style="list-style-type: none"> ● Introduction to Image Composite, Mosaic and Subset ● Introduction to Image Rectification, Classification and Assessment <p>7: Practical group projection within a GIS-Framework (GRASS / QGIS / Inkscape / ArcView or other)</p> <ul style="list-style-type: none"> ● trying methods and tools on a selected topic from Environment-, Nature-, Clima Protection or Renewable Energy given problem ● Report and Group presentation of the results |
| <p>Qualification Goals</p> | <p>Participants will be able to understand, work and monitor with core principles, techniques and application of geographic information systems, remote sensing and computer cartography in a professional skill level.</p> <p>Learning Outcome</p> <ul style="list-style-type: none"> ● Participants know the key principles of design and policy in the field of urban planning and strategies for their implementation in the field ● Participants get a basic professional experience in design, compile and develop a spatial database and set of analytical tools within a GIS framework appropriate to a given problem. |

| | |
|---|--|
| | Furthermore, participants should get an interdisciplinary view of use from GIS frameworks in the field of Clima-, Environment-, Nature-Protection and Renewable Energy. |
| Planing period | 2 nd to 6 th month |
| Module Duration | 16 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 5 (based on 25 hours = 1 credit) |
| Total Workload and Type (individual studies + contact hours) | 128 hours (Contact hours 48 h = 37,5 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | none |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation, projection report and group presentation |
| Contribution to Final Grade | 8,50% |
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Completing exercises, group projection and presenting the results |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | Group work |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>Markus Neteler, Helena Mitasova (2008), Opensource GIS: A GRASS GIS Approach, Springer Science Business Media, LLC</p> |

Section II Module 4 Topic 01 - 13
Clima-, Environment- and Nature-Protection

| | |
|-------------------------------------|---|
| Module No./Code | M4 - 01 |
| Module Designation | Facts in Environment and Nature Protection (EU- and National Framework) |
| Units of the Module (if applicable) | 1: Introduction |
| Module Content | NN Specific topics: NN |
| Qualification Goals | NN |

| | |
|--|---|
| Planing period | 2 th month 1 st day of the module |
| Module Duration | 1 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 0 |
| Total Workload and Type (individual studies + contact hours) | 8 hours (Contact hours 8 h = 100 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | All lectures in M1. M2 and M3 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation and study report |
| Contribution to Final Grade | 0,6% |

| | |
|---|---|
| | |
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | none |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>NN</p> |

| | |
|-------------------------------------|--------------------------------------|
| Module No./Code | M4 – 02 |
| Module Designation | Circular Economy - Act and Law |
| Units of the Module (if applicable) | 1: Introduction |
| Module Content | NN Specific topics: NN |
| Qualification Goals | NN |

| | |
|--|--|
| Planing period | 2 th month |
| Module Duration | 2 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 0,5 (1 in addition with 0,5 by successful participation in M4 – 04 Water management, Protection and Law) |
| Total Workload and Type (individual studies + contact hours) | 16 hours (Contact hours 8 h = 50 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | M4-01 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation and study report |
| Contribution to Final Grade | 1,1% |

| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Group work to built a case study and present the result |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | Case study |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>EPA website (Environmental Protection Agency)</p> |

| | |
|-------------------------------------|---|
| Module No./Code | M04 - 11 |
| Module Designation | Nature Protection – Management and Law |
| Units of the Module (if applicable) | 1: Laws and directives – Protected Areas 2: Biodiversity 3; FFH and Birds Protection Directive 4: Management of Natura 2000 Areas |
| Module Content | The Topics as above will be presented both as theoretical input by trainer, including single and group exercises, own research, evaluations and assessments by participants, films, presentations and excursions will complete the training |
| Qualification Goals | Overview of problem in national and international context, Overview of relevant acts and directives, specific clauses and their implementation into practice, interpretation of Area protection maps, red lists and implications |

| | |
|---|---|
| Planing period | 3 rd month |
| Module Duration | 4 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 1 |
| Total Workload and Type (individual studies + contact hours) | 32 hours (Contact hours 16 h = 50 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | M04 - 01 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation, presentations, tests, written contributions as single or team work |
| Contribution to Final Grade | 2,1 % |

| | |
|--|---|
| <p>Teaching and Learning Methods of the Module</p> | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Workout a study report |
| <p>Special Features (e.g. share of distance learning, field trips, guest lectures, etc.)</p> | <p>none</p> |
| <p>Literature (compulsory reading/additional literature)</p> | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>National and European Laws</p> <p>Water Framework Directive,</p> <p>WRRL</p> <p>NATURE2000 Directive and newsletters</p> |

| | |
|-------------------------------------|---|
| Module No./Code | M04 - 12 |
| Module Designation | NATURA 2000 – Directive, Water Framework and Stakeholders |
| Units of the Module (if applicable) | 1: Laws and directives 2: Research and Field Work Challenges 3; Water Framework in Nature 2000 Directive 4: Stakeholder Management in Nature 2000 Projects |
| Module Content | The Topics as above will be presented both as theoretical input by trainer, including single and group exercises, own research, evaluations and assessments by participants, films, presentations and excursions will complete the training |
| Qualification Goals | Overview of problem in national and international context, Overview of relevant acts and directives, specific clauses and their implementation into practice, interpretation of Area protection maps, red lists and implications |

| | |
|---|---|
| Planing period | 3 rd month |
| Module Duration | 8 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 2 |
| Total Workload and Type (individual studies + contact hours) | 64 hours (Contact hours 32 h = 50 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | M04 – 01 and M04 – 11 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation, Presentations, tests, written contributions as single or team work |

| | |
|---|---|
| Contribution to Final Grade | 4,2 % |
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented lecturer input • Active participation by the participants through discussion and contributions • Group work in a Case study preparation and report |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | practical exercises in class and in the field, films, discussions rounds and presentations by the students |
| Literature (compulsory reading/additional literature) | <p>Relevant articles and cases will be handed out by the lecturer during the lectures.</p> <p>Recommended literature:</p> <p>National and European Laws</p> <p>Water Framework Directive,</p> <p>WRRL</p> <p>NATURE2000 Directive and newsletters</p> |

| | |
|---|---|
| Module No./Code | M04 - 13 |
| Module Designation | Project work in Environment and Nature Protection |
| Units of the Module (if applicable) | 1: Introduction 2: Group work project |
| Module Content | Practical project will be designed planned and implemented by the course participants. Using all tools and knowledge gained in the theoretical lectures. Trainer helps and coaches. But preferably keeps in the background. |
| Qualification Goals | Overview of problem in national and international context, Overview of relevant acts and directives, specific clauses and their implementation into practice, interpretation of Area protection maps, red lists and implications. |
| Planing period | 4 th month |
| Module Duration | 11 day's |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 2 |
| Total Workload and Type (individual studies + contact hours) | 88 hours (Contact hours 8 h = 8 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | M04 - 01 to M04 – 12 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation, presentation, filled and worked project management templates and visualisations in a study report |
| Contribution to Final Grade | 5,8 % |

Section III Module 5 Topic 01 - 10
Sustainability in Renewable energy

| | |
|-------------------------------------|--|
| Module No./Code | M5 - 01 |
| Module Designation | Introduction to Energy Distribution, Smart Grid and Future Mobility |
| Units of the Module (if applicable) | 1: Introduction to Energy Distribution and Smart Grid 2: Future Mobility in the Smart Grid |
| Module Content | <p>This module provides an overview and knowledge about modern grid systems and grid management in quarters, regions and smart cities. It spend deeper understanding of the needs in production, distribution and consumption of energy in the sectors electrical, heating/cooling and traffic. The relations and interconnections in national, european and global context want to be displayed. Participants get an first understanding about the relations, dispatch and integration in the different kinds of grid (Electric, NatGas, DistrictHeating/Cooling, Water- and WasteWater, Air-, Rail- and Street - Traffic, Sea- and RiverTransportation, a.s.o.) and the use for a modern approach in the society,</p> <p>Specific topics:</p> <p>1: Introduction to Energy Distribution and Smart Grid</p> <ul style="list-style-type: none"> ● Basics of electric energy distribution and grid topologies in european countries ● Optimized intelligent grids (virtual and smart grid concepts) in respect to losses switching possibilities, high performance and fast structure manipulation ● Future storage grid and distribution behaviors Leading and control performances to intelligent grid switching Development of grid parameters, loss minimization ● Monitoring leading control performances and switching ● Mobile and long run efficient distribution systems ● High efficient high power static converter systems ● Other types and use of grid connections in energy distribution ● Relations, dispatch and integration in different kinds of grid (Electric, NatGas, DistrictHeating/Cooling, Water- and WasteWater, Air-, Rail- and Street - Traffic, Sea- and RiverTransportation, a.s.o.) |

| | |
|---------------------|--|
| | <p>2: Future Mobility in the Smart Grid</p> <ul style="list-style-type: none"> ● Planning and integration of Future Mobility solutions ● Electrical Mobility and problematic of Charging in the grid |
| Qualification Goals | <p>Participants obtain specific knowledge in structure, development and resilience of modern grid architecture and distribution systems, special for intelligent controlled mixed alternative energy supply.</p> <p>Also they know multi role grids, necessary controls and algorithm for high efficient grid leading, regulation utilities and problems in modern dispatch. The participants know the basics of grid hardware, seen in cable and tower supply systems switching, substation transformer of new art for mixed alternative suppliers.</p> |

| | |
|---|--|
| Planing period | 5 th month 1 st week of the module |
| Module Duration | 4 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 0 |
| Total Workload and Type (individual studies + contact hours) | 32 hours (Contact hours 20 h = 66,6 %) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | All lectures in M01 must have been completed and passed |

| | |
|-------------------------------------|--|
| Module No./Code | M05 - 03 |
| Module Designation | Introduction to Solar Thermal Energy and Storages |
| Units of the Module (if applicable) | <p>1: Basics of Solar Thermal Systems and Storages</p> <p>2: Basics of Concentrated Solar Power Systems</p> <p>3: Life-Cycle and Environmental Impact of Solar Thermal Systems and Projects</p> |
| Module Content | <p>In this module participants get an introduction in the potential of solar energy use in thermal applications and best-practise in this field. Focused on small and medium size systems they are able to understand solar thermal integration in heating, climatization and colling processes up to thermal storage in building and district infrastructure. In the discussion and field trip also want to orientated for environmental impact of solar thermal use.</p> <p>Specific topics:</p> <p>1: Basics of Solar Thermal Systems and Storages</p> <ul style="list-style-type: none"> ● importance of solar thermal systems for hot water and heating systems ● fundamentals and components of an solar thermal system with vacuum and flat collector integration ● fundamentals of thermal storage in small and medium size ● Basics of Power-to-Heat integration ● Smart Home and Smart building systems in heating and climatization with solar thermal use ● Integration of thermal storages in district infrastructure and smart grid connection <p>2: Basics of Concentrated Solar Power Systems</p> <ul style="list-style-type: none"> ● fundamentals and best-practise of concentrated solar power systems ● project integration of solar thermal power systems and waste heat in district infrastructure and smart grid <p>3: Life-Cycle and Environmental Impact of Solar Thermal Projects</p> <ul style="list-style-type: none"> ● Preparation, Planning, Permission, Funding, Construction, Maintanance and Sevice of solar thermal systems ● Environmental impact of solar thermal systems ● Local and regional potential of solar thermal use in infrastructure and climate protection |

| | |
|---|---|
| Qualification Goals | <p>Participants get an overview and first knowledge in the field of solar thermal use and integration in building, smart grid and infrastructure. They are able to understand solar thermal solution and storages and its integration in projects in local and regional as important part for climate protection and energy efficiency.</p> <p>By practical orientation and visiting best-practise with solar thermal integration they understand the key factors for solar thermal energy use and storage in the daily work.</p> |
| Planing period | 5 th month |
| Module Duration | 4 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 1 (in addition with 6 hours focused on Power-to-heat and PV-Cooling in Module M05 – 02) |
| Total Workload and Type (individual studies + contact hours) | 32 hours (Contact hours 34 h = 67%) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | lecture in M05 – 01 and M05 – 02 must have been completed and passed |
| Responsible Coordinator | Program Director |

|-------------------------------------|---|
| Module No./Code | M05 - 07 |
| Module Designation | Introduction to Geothermal Energy, District Heating, Climatization and Cooling |
| Units of the Module (if applicable) | <p>1: Introduction to Geothermal Energy</p> <p>2: Introduction to District Heating</p> <p>3: Introduction to Climatization and Cooling</p> <p>4: Best-Practise and Environmental Impact of Geothermal use in our energy system</p> |
| Module Content | <p>This module and lectures introduce the participants in the fundamentals and potential of geothermal resources and systems in the energy sectors and systems. By built a general understanding of the resource use and technology approach participants are able to understand the economical and environmental impact of geothermal resource usage in projects with district heating and cooling (small, medium and big scale).</p> <p>Specific topics:</p> <p>1: Introduction to Geothermal Energy</p> <ul style="list-style-type: none"> • Geology and Earth heat • Basics of geothermal systems • Energy reservoirs and energy network • Investments, operating costs, costs of current production, efficiency • Case studies and reference installations • National and international utilisation potentials <p>2: Introduction to District Heating and Cooling</p> <ul style="list-style-type: none"> • Concept and Components of District Heating and Cooling Systems • Calculation of energy prices and cost effectiveness • Case studies and reference installations • Local and regional utilisation potentials and impact <p>3: Introduction on Climatization and Cooling with Geothermal use in our energy system</p> <ul style="list-style-type: none"> • Heating pumps and Climatization • Basics of Climatization and Cooling • Case studiesy and reference installations • Local and regional utilisation potentials and impact <p>4: Best-Practise and Environmental Impact of Geothermal use in our energy system</p> <ul style="list-style-type: none"> • Ecological and life cycle analysis • Environmental Impact of Geothermal and District Heating and Cooling Projects |

| | |
|---|---|
| Qualification Goals | <p>The learning goal is to train the participants to understand and implement current technical concepts of the geothermal use in energy concepts and solution. They are able to achieve commerciality while meeting legal, social and environmental challenges from the aspect of geothermal resources and use in the local and regional matter. The lectures want to built an understanding of:</p> <ul style="list-style-type: none"> • Basic concepts of exploration and use of geothermal resources, the characterisation of geothermal reservoirs and the production of heat and power; • Integrated management techniques to deliver a geothermal energy project; • Present and future potential of geothermal energy in the global and regional energy resource portfolio. • District heating, climatization and cooling concepts, projects and best-practise |
| Planing period | 5 th month |
| Module Duration | 5 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 1 |
| Total Workload and Type (individual studies + contact hours) | 40 hours (Contact hours 20 h = 50%) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |
| Enrolment Prerequisites | M05 – 01 Introduction to Energy Distribution and M05 - 03 Introduction to Solarthermal Energy and Storage must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation and study report |

Section IV Module 06 Topic 01 – 03

Profile and Practise – Internship – Language In-Depth Training

| | |
|-------------------------------------|--|
| Module No./Code | M06 - 01 |
| Module Designation | Business Language In-Depth Training in one of the program national languages or english (english - german – hungarian – polish - romanian) |
| Units of the Module (if applicable) | I: In-Depth training in the program national language or english II: Publication in the program national language |
| Module Content | <p>In-Depth Language module serves to deepen the intercultural competencies of the participants and the deeper understanding of the development and framework of the country of internship.</p> <p>The knowledge built are integrated in the daily work and support the understanding of task and success in a practical orientated way. It offers also one more an opportunity for networking within a public or private organization.</p> <p>The publication development in team with the practitioners in the organization helps to form key corporate functions, participants can add to their own personal profile and references.</p> <p>The theme have to be defined based on a concrete practical project focused Clima-, Environment-, Nature- Protection and/or Renewable energy with the decisionmaker in the internship organisation and in agreement with the supervisor.</p> |
| Qualification Goals | <p>Learning Goals</p> <ul style="list-style-type: none"> • Develop awareness of intercultural relationship in concrete job-related tasks • Acquire specific career-related knowledge and specific job-related knowledge, depending on the nature of the internship • Develop knowledge of company processes and built stakeholder information and research paper about it <p>Qualification Goals</p> <ul style="list-style-type: none"> • Insight into the intercultural participation and networking • Application of language knowledge gained during study to deal with challenges of work • Train the language skills in practice <p>Competence Goals</p> |

EUBILD-UNAKLIM

| | |
|--|---|
| | <ul style="list-style-type: none"> • Ability to work in international interdisciplinary teams, also in an EU-wide and intercultural context • Ability to work in stakeholder information and public relations projects • Build ability to develop and maintain network and contact |
| Planing period | 7 th to 9 th month |
| Module Duration | 13 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 2 |
| Total Workload and Type (individual studies + contact hours) | 84 hours (Contact hours 40 h = 47,6%) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | The internship allows participants to put the competencies they have acquired into practice and earn a reference for their personal skill profile. |
| Enrolment Prerequisites | All lectures in M01 – M05 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | All lecturers from Modules 1 – 3 can act as internship supervisors |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation, publication and Reference |
| Contribution to Final Grade | 5,60% |

| | |
|---|--|
| Teaching and Learning Methods of the Module | <p>Group discussions, Online and blended learning tools Teaching and learning in the daily working process and tasks, Take part and report in national language based meetings in the organisation, Independent desk research in the national language and translations of newsletters, papers and documents</p> |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | <p>Various forms of communication, e.g.</p> <ul style="list-style-type: none"> • Online conference • Team and Personal meeting • Forums and Workshops • Email and Newsletters • Social networks |

| | |
|-------------------------------------|--|
| Module No./Code | M06 - 02 |
| Module Designation | Internship in the field with project in practise |
| Units of the Module (if applicable) | 1: Internship within a Company Project |
| Module Content | <p>Internship module serves to deepen participants ability to practically implement previously acquired knowledge and skills as well as offers an opportunity for networking within a public or private organization. Via acquired indepth knowledge of key corporate functions, participants can add to their own personal profile.</p> <p>They defines a concret project focused Clima-, Environment-, Nature- Protection and/or Renewable energy with the decisionmaker in the internship organisation and in agreement with the supervisor.</p> <p>At the end of the internship the participant reflects on his/her experiences in practice and how they relate to the theories and models that were covered during his/her education in the course.</p> |
| Qualification Goals | <p>Learning Goals</p> <ul style="list-style-type: none"> • Develop awareness of concrete job-related tasks • Acquire specific career-related knowledge and specific job-related knowledge, depending on the nature of the internship • Develop knowledge of company processes <p>Qualification Goals</p> <ul style="list-style-type: none"> • Insight into company decision making processes • Application of theoretical knowledge gained during study to deal with challenges of work • Application of methods to solve problems of practice <p>Competence Goals</p> <ul style="list-style-type: none"> • Ability to work in interdisciplinary teams, also in an EU-wide and international context • Ability to work independently on complex practice-related projects • Build a profile that spans disciplines and functions • Build ability to develop and maintain network and contact |
| Planing period | 7 th to 9 th month |
| Module Duration | 61 day's |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 10 |

| | |
|---|--|
| | EUBILD-UNAKLIM |
| Total Workload and Type (individual studies + contact hours) | 416 hours (Contact hours 16 h = 3,9%) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | The internship allows participants to put the competencies they have acquired into practice and earn a reference for their personal skill profile. |
| Enrolment Prerequisites | All lectures in M01 – M05 must have been completed and passed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | All lecturers from Modules 1 – 3 can act as internship supervisors |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation and Reference, Internship study report |
| Contribution to Final Grade | 27,5% |

| | |
|---|--|
| Teaching and Learning Methods of the Module | Working in daily process and tasks, working in project teams, take part and report in meetings in the organisation, independent desk research |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | Various forms of communication, e.g. <ul style="list-style-type: none"> • Online conference • Team meetings • Personal meeting • Brainstorming • Forums and Workshops • Email • Social networks |

| | |
|---|---|
| Module No./Code | M06 - 03 |
| Module Designation | Project Kolloquium as Final of the course |
| Units of the Module (if applicable) | 1: Project Colloquium |
| Module Content | <p>Project Colloquium reflect and demonstrate the acquired knowlegde and skills of all participants by presenting their Internship report to the audience by poster, structured presentation and feedback.</p> <p>It demonstrate participants skills in event preparation and execution, Stakeholder participation and process, communication and presentation.</p> <p>As final event of the course it reflect the success of the program and the voice of costumer about it.</p> <p>It celebrate also the certifications handing over to the participants.</p> |
| Qualification Goals | <p>Participants obtain and demonstrate their specific skills from their study and practical results of their participation in the course and internship.</p> <p>The participants organise this event for themselves as final event, demonstrate and earn also basic skills in event management. They reflect again their skills in project management.</p> <p>Furthermore, participants should get an interdisciplinary view to challenges in the fields Environment-, Nature Protection and Renewable Energy from the presentations of the internship results of other participants in the course.</p> |
| Planing period | 9 th month – last week |
| Module Duration | 3 day`s |
| Module Frequency | On Requirement |
| Number of Assigned ECTS Credits | 0 |
| Total Workload and Type (individual studies + contact hours) | 20 hours (Contact hours 8 h = 40,0%) |
| Type of Lecture (compulsory, elective, etc.) | Compulsory |
| Usability of the Module for Other Study Programs | none |

| | |
|---|---|
| Enrolment Prerequisites | All lectures M01 to M05 and M06 – 01 Internship must have been completed |
| Responsible Coordinator | Program Director |
| Name of the Lecturer | N.N. |
| Teaching Language | English/German/Hungarian/Polish/ Romanian |
| Testing Category / Requirements for Credit Award | Participation and Reference from Internship, Internship project report |
| Contribution to Final Grade | 1,3% |
| Teaching and Learning Methods of the Module | <ul style="list-style-type: none"> • Practice-oriented field input • Active participation by the participants |
| Special Features (e.g. share of distance learning, field trips, guest lectures, etc.) | none |
